

# SANTA

# BOX

01

We select a set of objects that are not sharp, recognizable and safe for children and we place one in a bag or a box without being seen.

02

We form two teams, lined up behind a starting line, that must run a course with cones (or other substitute objects) in order to make two slaloms.

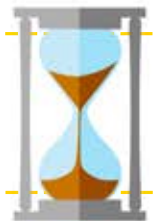

03

The first who guesses right wins two points and the second gets one point, if within the time limit

04

10 seconds to guess, after this time the player goes back to their team and another player takes their place.

## VARIATION

We can modify the path or the complexity of the objects to be guessed, making it progressively more difficult.
