

MOVING PLANETS

01

Define a large playing area and put a ball representing the sun in the middle of it.

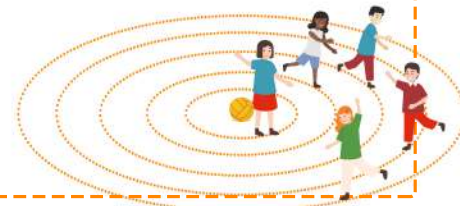

02

Draw, together with the children, 5 concentric orbits around the sun, about 2 meters apart.

03

The children place themselves on the orbits and when the music starts they move around the sun at the same time and maintaining their alignment.

04

Every 20/30 seconds give the change signal and the planets must change orbit going to occupy the outermost one.

05

The planet on the largest orbit must quickly pass behind the backs of its companions and go to occupy the orbit closest to the sun.
